Calm Launcher for your TCL TV

Install guide. About 5 minutes. No computer and no account needed.

1. Install

1. On the TV open the **Google Play Store**, search **Downloader** (orange icon, by AFTVnews) and install it.
2. Open **Downloader**. On its **Home** tab select the URL box, type **is.gd/calmtv** and select **Go**. If it complains, type the full **https://is.gd/calmtv**.
3. It downloads a 13 MB file called app-debug.apk, then shows **Install**. Select it.
4. The first time, the TV says installs from this app are blocked. Select **Settings**, turn **Allow** on for Downloader, press **Back**, then select **Install** again.
5. When it finishes select **Open**. Downloader asks to delete the file: choose **Delete**.

2. Use it

- Open **Calm Launcher** from the TV's apps list.
- Move with the remote's arrows. The focused tile grows, gets a white ring and shows its name.
- **Daily** shows whichever of Netflix, Prime Video and YouTube are installed. **Other apps** shows the rest.
- **Long-press OK** on an app: Add to Daily, Remove from Daily, Hide, App info.
- **All apps** lists every app. Long-press **Settings** to bring hidden apps back.
- Back does nothing. Home, while you are in the launcher, jumps to the first tile.
- The photos change every 20 seconds. The caption is top right.

3. Make Home open it (optional, needs a computer once)

Skip this if you are happy opening Calm Launcher from the apps list. Until you do it, Home may keep opening the stock screen.

1. On the TV: **Settings > Device Preferences > About**, press OK on **Build** seven times. Then open **Developer options** and turn on **USB debugging** (and network debugging if shown).
2. Note the TV's IP address from its Wi-Fi settings.
3. On a laptop on the same Wi-Fi, with Android's adb tool installed, run these two lines. Accept the "Allow USB debugging?" box on the TV (choose Always allow).

```
adb connect TV_IP:5555
adb shell cmd package set-home-activity com.calmlauncher/.MainActivity
```

If the stock launcher still wins, this turns it off. It is reversible:

```
adb shell pm disable-user --user 0 com.google.android.tvlauncher
```

To undo: adb shell pm enable com.google.android.tvlauncher. These commands are not yet tested on your TCL, and some firmware blocks network debugging.

4. Updating later

Open Downloader, enter **is.gd/calmtv** again and install over the existing app. The link always points to the newest build.

5. If something goes wrong

- **Downloader cannot download:** check the TV's Wi-Fi and retype the link.
- **Install is blocked:** allow installs from Downloader in Settings (install step 4).
- **A tile will not open:** that app is probably not installed. The TV says "Can't open that app".
- **Home shows the stock screen:** do section 3, or open Calm Launcher from the apps list.
- **To remove it:** Settings > Apps > Calm Launcher > Uninstall.
